SUMMARY

Turning complex AI problems into production systems — agentic pipelines, RAG architectures, and LLM applications built to be reliable, evaluated, and cost-efficient. Over 3 years, consistently worked at the intersection of what's technically possible and what's actually worth building: scoping systems around user needs, hardening them against real-world failure, and measuring outcomes rather than assuming them.

SKILLS

GenAI & Agentic Systems	RAG, Multi-Agent Orchestration (LangGraph), Prompt Engineering, LLM Evaluation
Product Strategy	AI System Design, Feature Prioritisation, Rapid Prototyping, Latency Optimisation
Engineering & MLOps	Python, FastAPI, .NET, REST APIs, Docker, CI/CD (GitHub Actions), Observability
Data & Databases	PostgreSQL, SQL Server, Redis, Qdrant, Vector Search

EXECUTIVE EDUCATION

Product Management with Generative & Agentic AI, BITS School of Management (BITSoM) **2025 - 2026**

- Executive certification covering AI product strategy, GenAI product lifecycle, product discovery, prioritisation, AI system design, and agentic AI product development.

WORK EXPERIENCE

Software Engineer (Implementation-Conversion Analyst), FIS Global

Jun 2022 - Jul 2025

Bangalore, India

- Managed end-to-end **bank data conversion and deconversion** across U.S. and U.K. migration projects, processing millions of records spanning diverse document formats while supporting client delivery, issue resolution, and migration diagnostics.
- Automated encryption validation for **1,000+ documents** after uncovering a **silent PDF encryption bug** missed by legacy tools, tracing a passwordless encryption flag through raw file inspection and developing a Python detection utility.
- Designed and delivered core modules for an **internal Data Migration Manager** (Angular, .NET, SQL Server), including project tracking, AES encryption, and custom data grids, while introducing **static dropdown caching** to eliminate redundant database calls.
- Developed a **config-driven PDF extraction framework** supporting **50+ document layouts**, reducing manual data-entry effort by **90%** and achieving a **<5% correction rate** without per-document code changes.
- Co-developed an **LLM-powered SQL generation platform** for an organisation-wide innovation challenge, combining natural-language query generation with SQL Server execution-plan analysis to streamline SQL authoring and optimisation.

PROJECTS

AutoML Orchestrator — Agentic ML Pipeline (*Python, FastAPI, LangGraph, Docker*) [GitHub](#)

- Designed a **10-agent LangGraph orchestration platform** that transforms datasets and natural-language goals into deployed, evaluated machine-learning models with minimal human intervention.
- Introduced a **6-provider LLM routing layer** featuring intelligent failover, completion caching, and rate-limit recovery to improve inference reliability while reducing redundant token consumption.
- Implemented **agentic self-repair** for workflow failures, enabling code rewriting and safe re-execution within isolated sandbox environments, eliminating 98% of unhandled failures.
- Productionised the platform with **132 automated tests**, MLflow model versioning and staged deployment, LLM cost controls, runtime quotas, prompt-injection guardrails, and Prometheus/Grafana observability.

Autonomous AI Research System (*Python, FastAPI, LangGraph, Qdrant, Docker*) [GitHub](#)

- Developed a **verification-gated research assistant** that validates every generated claim through quote matching and NLI-based citation verification before response generation.
- Achieved **≥85% retrieval relevance** using a **hybrid RAG pipeline** combining BM25, dense retrieval, reciprocal rank fusion, cross-encoder reranking, contextual embeddings, and multi-provider LLM routing.
- Integrated a CI-gated evaluation framework that maintained **≥98% grounded claim support** by validating citations against a frozen golden dataset before deployment.
- Architected a resilient **7-node LangGraph workflow** with checkpoint-based recovery, automatic replanning, and distributed deployment across FastAPI, Next.js, Redis, PostgreSQL, and Qdrant.

EDUCATION

International Institute of Information Technology, Pune

2018 - 2022

Bachelor of Computer Engineering with Honors in AI/ML

CGPA: 8.54
